EXPRESS SCRIPTS®

Your Guide to Generics

Get the same health benefits and pay less.

EXPRESS SCRIPTS®

Proven safety and savings

Medications should be affordable. That's why FDA-approved **generic drugs are a great option**. They're safe, effective alternatives to brand-name drugs — and typically cost much less.

FDA-approved generic drugs:

- **Cost about 50% to 70% less than brand-name drugs**¹
- Have the same active ingredients as their brand-name equals
- Work the same way
- Have the same quality, strength and purity

Nearly **8 in 10 prescriptions filled in the U.S. are generics**.² Generics also have a truly big advantage over newer medications. By the time a generic becomes available, it's already been prescribed as a brand-name drug for an average of 17 years — so it has proved its safety and effectiveness.

A healthy difference

You and your doctor make the decisions about your medication. Keep in mind, though, you might see a big cost difference between generic and brand-name drugs. Here's what you'll typically pay under your plan:

Generic drugs	\$
Preferred brand-name drugs	\$\$
Nonpreferred brand-name drugs	\$\$\$

Ask your doctor about generics

Each year, more brand-name drugs lose their patent protection, which means less expensive generics can be made and prescribed. Ask your doctor if a generic drug is right for you. If one isn't available, **ask your doctor about another preferred alternative** — a medication with different ingredients that can treat the same condition.

Preferred brand-name drugs can also save you money.

If your doctor feels a generic won't work for you or if one isn't available, your doctor can prescribe a preferred brand-name drug. While they might have higher copayments than generics, they'll still cost you less than nonpreferred brand-name drugs.

For questions about generics, or to see what medications are preferred by your plan, log in to **Express-Scripts.com** or call the number on your member ID card.
